> More about IPSA

IPSA Solutions are focused on the optimization of the hospital storage and supply of drugs and medical devices.

Through the integration of hardware and software IPSA brings the logics of the "Internet of things (IoT)" to hospitals. The IoT technologies allow the union between the physical and the digital: the objects used by the operators for clinical / logistics processes in the wards and in operating rooms become intelligent and communicate in an integrated manner with the hospital software providing data and information useful to the management and process improvement.

The solutions include:

IPSA

- Smart Hardware, a range of intelligent devices – Smart Carts, Smart Drawers and Smart Cabinets with embedded – able to simplify the activities since supporting the operators in the storage and distribution activities;
- Smart Software, a complete suite of modular, scalable and secure solutions – like Smart Stock, Smart Track and Smart Therapy – with features like the real-time inventory, the full traceability of products and consumption till the clinical & logistics management of the drugs distribution processes with a solution able to support the preparation, distribution and administration of drugs in hospital wards.
